1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
2. The disclosure is objected to because of the following informalities:
on page 8, line 27, the term "smooths" appears to be misspelled.
3. Applicant has complied with the conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 119(e).
4. Claims 5-13 are objected to because of the following informalities:
the step of claim 5 appears to be already present in parent claim 4. Claims 6-13 are objected for depending from parent claim 5. Appropriate correction is required.
5. Claims 1-4 and 14-25 are allowed. The prior art does not disclose a method for detecting atmospheric disturbances including the steps of: providing infrasound frequency magnitudes of received noise spectra; comparing said infrasound frequency magnitudes to a computed infrasound threshold; and determining locations of said atmospheric disturbances with the utilization of infrasound frequency magnitudes that exceed said threshold as recited in claim 1. Also the prior art does not disclose a method for detecting atmospheric disturbances including the steps of: sensing atmospheric noise to obtain noise signals; filtering said noise signals to eliminate signals at frequencies above a predetermined frequency and providing signals at frequencies within a band of frequencies below said predetermined frequency; comparing amplitudes of signals at frequencies in said band below said predetermined frequency to a first preselected threshold; determining a representative amplitude and representative frequency for signals at frequencies in said band below said predetermined frequency that have amplitudes which exceed said first preselected threshold; comparing said representative frequency to a

predetermined frequency threshold; comparing said representative amplitude to a second preselected threshold when said representative frequency exceeds said predetermined frequency threshold; and indicating when said representative amplitude exceeds said second preselected threshold as recited in claim 14.
